

“Can you help leadership understand our scholars well enough to make better decisions?”

- 1 Who are our scholars right now?**
- 2 Are scholars progressing toward success?**
- 3 Where are we seeing strong impact?**
- 4 Who needs additional support right now?**
- 5 Are there equity gaps we should address?**

- ✗ Causal impact**
- ✗ Predictive modeling**
- ✗ Statistical significance**
- ✗ Technical architecture**

“Use scholar data to help leadership understand progress, identify risk, and make informed decisions about where to focus support and resources.”

What will be handled in Data Preprocessing process.

- ✓ Missing values**
- ✓ Inconsistent entries**
- ✓ Ambiguous definitions**
- ✓ More columns than needed**

“This data tells a story about who our scholars are, how they’re progressing, and where support can make the biggest difference.”

0–5 min | Read the Prompt (Do NOT Touch the Data Yet)

5–15 min | Data Scan & Sanity Check

15–25 min | Define 5–7 Core Metrics

25–45 min | Core EDA & Segmentation

45–60 min | Create 4–5 Simple Visuals

60–75 min | Build the Story (This Is the Most Important Part)

75–85 min | Assemble Slides (5–6 Max)
